Hello everybody...

Today we are going to put on our artists hats and use our creative skills...

First we are going to make a viewfinder.

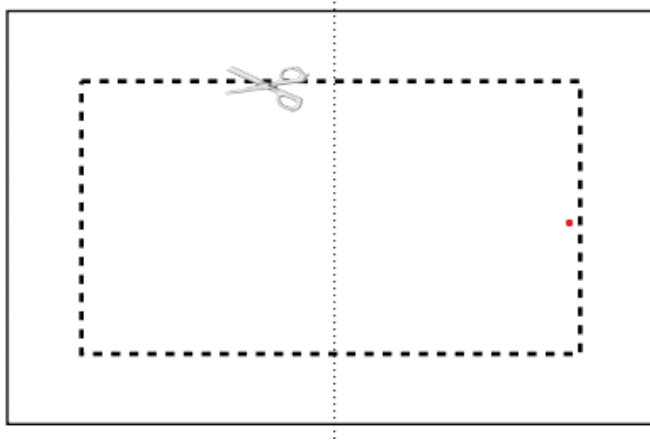

You will need paper and scissors....ask a grown up for help. Fold the paper in half and cut out a rectangular shape on the folded area.

Audio
Recording

Open the paper out....you will see that you have a blank area to look through. It will look like an empty picture frame.

Or you can put your thumb and first finger together to create a view finder....

You can use your viewfinder to identify close up patterns in your environment, such as leaf patterns or a stones.

You can use a viewfinder to identify close-up patterns in the environment, such as brick or leaf patterns...

You can use your viewfinder to look at objects in a new way .

Choose a challenge....

Look at patterns around you.

Look at interesting textures in your indoor or outdoor environment.

They can be natural or manmade features.

These are designed to get you used to looking through the view finder. It also helps you to look at your environment in a different way.

Have fun.
